[How to create a build plan](#)

Your build plan defines everything about your build process. Each plan has a Default Job when it is created. More advanced configuration options (including those for plugins), and the ability to add more jobs will be available to you after creating this plan.

Each plan has a default job when it is created. In this section, you can configure the Tasks for this plan's default job. You can add more jobs to this plan once the plan has been created.

A task is an operation that is run on a Bamboo working directory using an **executable**. An example of task would be the execution of a script, a shell command, an Ant Task or a Maven goal. [Learn more about tasks.](#)
