

Developer Report

Acunetix Security Audit

20 June 2018

Generated by Acunetix

Scan of https://x2c.mphasiscloud.com/x2cweb/login?preAuthFlag=true

Scan details

Scan information	
Start time	20/06/2018, 11:57:21
Start url	https://x2c.mphasiscloud.com/x2cweb/login?preAuthFlag=true
Host	https://x2c.mphasiscloud.com/x2cweb/login?preAuthFlag=true
Scan time	13 minutes, 34 seconds
Profile	Full Scan

Threat level

Acunetix Threat Level 3

One or more high-severity type vulnerabilities have been discovered by the scanner. A malicious user can exploit these vulnerabilities and compromise the backend database and/or deface your website.

Alerts distribution

Total alerts found	1749
1 High	1
Medium	1622
① Low	22
1 Informational	104

Alerts summary

nginx Integer Overflow

Classification		
CVSS2	Base Score: 5.0 Access Vector: Network_accessible Access Complexity: Low Authentication: None Confidentiality Impact: Partial Integrity Impact: None Availability Impact: None Exploitability: Proof_of_concept Remediation Level: Official_fix Report Confidence: Not_defined Availability Requirement: Not_defined Collateral Damage Potential: Not_defined Integrity Requirement: Not_defined Integrity Requirement: Not_defined Target Distribution: Not_defined	
CVSS3	Base Score: 7.5 Attack Vector: Network Attack Complexity: Low Privileges Required: None User Interaction: None Scope: Unchanged Confidentiality Impact: High Integrity Impact: None Availability Impact: None	
CVE	CVE-2017-7529	
CWE	CWE-190	
Affected items		Variation

nginx Integer Overflow

Severity	High
Reported by module	/Scripts/PerServer/Version_Check.script

Description

A security issue was identified in nginx range filter. A specially crafted request might result in an integer overflow and incorrect processing of ranges, potentially resulting in sensitive information leak (CVE-2017-7529). When using nginx with standard modules this allows an attacker to obtain a cache file header if a response was returned from cache. In some configurations a cache file header may contain IP address of the backend server or other sensitive information. Besides, with 3rd party modules it is potentially possible that the issue may lead to a denial of service or a disclosure of a worker process memory.

Impact

Information Disclosure, Denial of Service

Recommendation

Upgrade nginx to the latest version or apply the patch provided by the vendor.

Backup files

Severity	Medium
Reported by module	/Scripts/PerFile/Backup_File.script

Description

A possible backup file was found on your web-server. These files are usually created by developers to backup their work.

Impact

Backup files can contain script sources, configuration files or other sensitive information that may help an malicious user to prepare more advanced attacks.

Recommendation

Remove the file(s) if they are not required on your website. As an additional step, it is recommended to implement a security policy within your organization to disallow creation of backup files in directories accessible from the web.

Error message on page

Severity	Medium
Reported by module	/Scripts/PerFile/Text_Search_File.script

Description

This alert requires manual confirmation

Application error or warning messages may expose sensitive information about an application's internal workings to an attacker.

Acunetix found an error or warning message that may disclose sensitive information. The message may also contain the location of the file that produced an unhandled exception. Consult the 'Attack details' section for more information about the affected page.

Impact

Error messages may disclose sensitive information which can be used to escalate attacks.

Recommendation

Verify that this page is disclosing error or warning messages and properly configure the application to log errors to a file instead of displaying the error to the user.

HTML form without CSRF protection

Severity	Medium
Reported by module	/Crawler/12-Crawler_Form_NO_CSRF.js

Description

This alert requires manual confirmation

Cross-Site Request Forgery (CSRF, or XSRF) is a vulnerability wherein an attacker tricks a victim into making a request the victim did not intend to make. Therefore, with CSRF, an attacker abuses the trust a web application has with a victim's browser.

Acunetix found an HTML form with no apparent anti-CSRF protection implemented. Consult the 'Attack details' section for more information about the affected HTML form.

Impact

An attacker could use CSRF to trick a victim into accessing a website hosted by the attacker, or clicking a URL containing malicious or unauthorized requests.

CSRF is a type of 'confused deputy' attack which leverages the authentication and authorization of the victim when the forged request is being sent to the web server. Therefore, if a CSRF vulnerability could affect highly privileged users such as administrators full application compromise may be possible.

Recommendation

Verify if this form requires anti-CSRF protection and implement CSRF countermeasures if necessary.

The recommended and the most widely used technique for preventing CSRF attacks is know as an anti-CSRF token, also sometimes referred to as a synchronizer token. The characteristics of a well designed anti-CSRF system involve the following attributes.

- The anti-CSRF token should be unique for each user session
- The session should automatically expire after a suitable amount of time
- The anti-CSRF token should be a cryptographically random value of significant length
- The anti-CSRF token should be cryptographically secure, that is, generated by a strong Pseudo-Random Number Generator (PRNG) algorithm
- The anti-CSRF token is added as a hidden field for forms, or within URLs (only necessary if GET requests cause state changes, that is, GET requests are not idempotent)
- The server should reject the requested action if the anti-CSRF token fails validation

When a user submits a form or makes some other authenticated request that requires a Cookie, the anti-CSRF token should be

included in the request. Then, the web application will then verify the existence and correctness of this token before processing the request. If the token is missing or incorrect, the request can be rejected.

Vulnerable Javascript library

Severity	Medium
Reported by module	/Scripts/PerFile/Javascript_Libraries_Audit.script

Description

You are using a vulnerable Javascript library. One or more vulnerabilities were reported for this version of the Javascript library. Consult Attack details and Web References for more information about the affected library and the vulnerabilities that were reported.

Impact

Consult References for more information.

Recommendation

Upgrade to the latest version.

Affected items

/x2cweb/resources/js/jquery.min.js

Details

Detected Javascript library jquery version 1.10.2.

The version was detected from file content.

Clickjacking: X-Frame-Options header missing

Severity	Low
Reported by module	/Scripts/PerServer/Clickjacking_X_Frame_Options.script

Description

Clickjacking (User Interface redress attack, UI redress attack, UI redressing) is a malicious technique of tricking a Web user into clicking on something different from what the user perceives they are clicking on, thus potentially revealing confidential information or taking control of their computer while clicking on seemingly innocuous web pages.

The server didn't return an **X-Frame-Options** header which means that this website could be at risk of a clickjacking attack. The X-Frame-Options HTTP response header can be used to indicate whether or not a browser should be allowed to render a page inside a frame or iframe. Sites can use this to avoid clickjacking attacks, by ensuring that their content is not embedded into other sites.

Impact

The impact depends on the affected web application.

Recommendation

Configure your web server to include an X-Frame-Options header. Consult Web references for more information about the possible values for this header.

O Cookie(s) without Secure flag set

Severity	Low
Reported by module	/RPA/Cookie_Without_Secure.js

Description

This cookie does not have the Secure flag set. When a cookie is set with the Secure flag, it instructs the browser that the cookie can only be accessed over secure SSL channels. This is an important security protection for session cookies.

Impact

None

Recommendation

If possible, you should set the Secure flag for this cookie.

Affected items

Web Server

Possible sensitive files

Severity	Low
Reported by module	/Scripts/PerFolder/Possible_Sensitive_Files.script

Description

A possible sensitive file has been found. This file is not directly linked from the website. This check looks for common sensitive resources like password files, configuration files, log files, include files, statistics data, database dumps. Each one of these files could help an attacker to learn more about his target.

Impact

This file may expose sensitive information that could help a malicious user to prepare more advanced attacks.

Recommendation

Restrict access to this file or remove it from the website.

① Email address found

Severity	Informational
Reported by module	/Scripts/PerFolder/Text_Search_Dir.script

Description

One or more email addresses have been found on this page. The majority of spam comes from email addresses harvested off the internet. The spam-bots (also known as email harvesters and email extractors) are programs that scour the internet looking for email addresses on any website they come across. Spambot programs look for strings like myname@mydomain.com and then record any addresses found.

Impact

Email addresses posted on Web sites may attract spam.

Recommendation

Check references for details on how to solve this problem.

Password type input with auto-complete enabled

Severity	Informational
Reported by module	/Crawler/12-Crawler_Password_Input_Autocomplete.js

Description

When a new name and password is entered in a form and the form is submitted, the browser asks if the password should be saved. Thereafter when the form is displayed, the name and password are filled in automatically or are completed as the name is entered. An attacker with local access could obtain the cleartext password from the browser cache.

Impact

Possible sensitive information disclosure.

Recommendation

The password auto-complete should be disabled in sensitive applications.

To disable auto-complete, you may use a code similar to:

<INPUT TYPE="password" AUTOCOMPLETE="off">
